

Startup

Website Redesign

Introduction

About Startup

It is a company that offers IT services such as consultancies and evaluations focused on helping companies accelerate their Digital Transformation process.

The Challenge

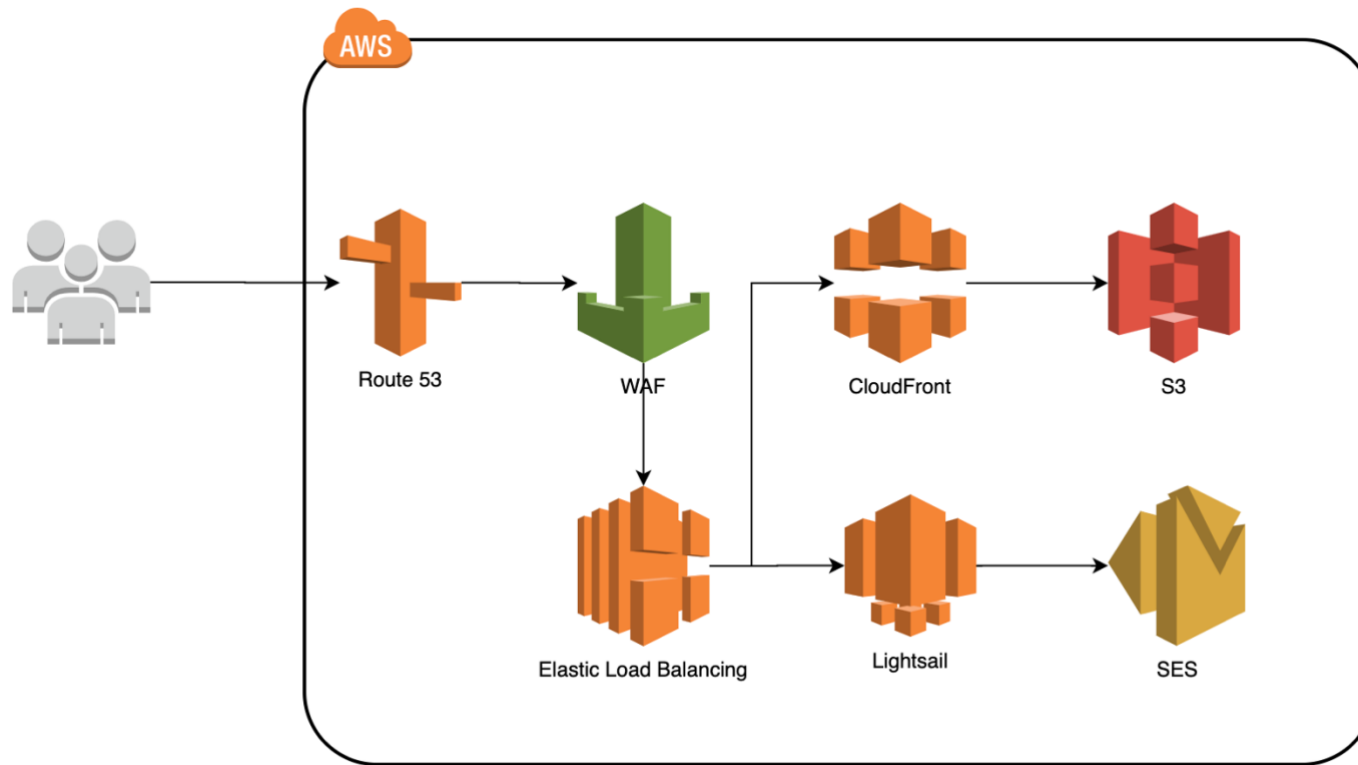

The customer had a need to improve the design and security of their website. In the same way, they wanted to reduce costs associated with hosting and domain of the website. The client was paying for shared hosting \$ 7.5 per month and \$ 10 per month for the web page building tool.

Solution

Architecture

For this client, [Nub8](#) defined an architecture using Amazon Web Services (AWS) security, computing, DNS, CDN and storage services. The design favored the decoupling, flexibility and security of the components involved in the solution.

By using the AWS public cloud, the website could be launched quickly, achieving the Time to Market that the client wanted, reducing their operational burden, since the services are fully managed by AWS.

Benefits

- ✓ Cloud native architecture.
- ✓ Time to Market.
- ✓ High Availability website.
- ✓ Website protected against the threats listed in OWASP Top 10, security problems for Linux instances and PHP applications.
- ✓ SEO and SEM configuration for the positioning of the website in the search engines.
- ✓ Monthly payment for the use of the AWS services involved in the solution.
- ✓ Timely and convenient support from [Nub8](#) for the implementation of new requirements and continuous improvement of services.
- ✓ Responsive web design that favors the organic positioning of the website.
- ✓ Constant monitoring and control of the website compartment.
- ✓ Private hosting, resources and system configurations. NOT Shared.
